从少儿推拿调理技术 看少儿健康服务产业

A Peep into the Children's Sub-health Services Industryfrom Child Massage

Regulating Techniques

中国山西运城中医小儿推拿学校

孙德仁

SUN Deren

Yuncheng TCM Pediatric Massage School, Shanxi, P.R.China 家国天下,家是构成社会的基本单位,而家庭的核心是孩子。孩子是家庭的,也是社会的,也是国家的。父母都很爱孩子,望子成龙是天下父母的共同心愿。
Our family is just as important as our country

Our family is just as important as our country to us. A family is the basic unit of the society, while the child is the core of the family. The child belongs not only to the family, but also to the society, to the nation, and to the country. All parents love their child. It is the common wish of all parents that longing to see their child will have a bright future.

很多的父母可能选择了各种各样的营养品和保健品,选择了名目繁多的早期教育。年轻父母常挂在嘴边的一句话是:不能让孩子输在起跑线上!要知道,身体健康,才是真正的起跑线

For this reason, many parents may choose a wide variety of nutritional supplements and health care products, or a variety of early education. "You can not let the children lose at the starting line!" This is a catch-phrase of young parents. But actually, good health is the real starting line.

那么,用什么方法使孩子智慧聪明,身体健康,不得病或少得病呢?这,就是简便、安全、有效的少儿推拿。

Then, what method should we use to make our children wise and healthy, not sick or less sick? The answer is simple: safe and effective massage for children.

少儿推拿通过疏通经络,调和气血,扶助人体正气,改善机体的内部环境,调节脏腑的生理功能,达到增强抗病能力、保健身体及防治少儿亚健康的目的。

Massage for children is such a discipline that, based on the TCM theory, diagnosis and treatment principle, a variety of massage manipulations is used to work at the specific parts or points in the child's body surface, producing good stimulation to free the channels and network vessels, to harmonize *qi* and *blood*, to support *the* right and improve the internal environment of the child's body for regulation of the physiological functions of the internal organs to enhance the diseases resistance, good health and prevention of child's sub-health.

这种简便而又安全的外治疗法,深受广大群众的欢迎,它是我国也是世界上最古老的一种防治疾病的物理疗法。相对于各种药物(包括名目繁多、花样翻新的保健品)治疗或预防疾病,它有着不可比拟的优势。

This external treatment, being simple and safe, very popular among the broad masses, is China's and also the world's most ancient physical therapy for disease prevention and treatment. Compared to those various medicines (including health care products under various names) used in the treatment or prevention of disease, child massage has incomparable advantages.

少儿推拿的第一个优势就是绿色疗法,安全有效。

The first advantage of the massage for children is that it is a green therapy, which proves to be safe and effective. 少儿推拿是一种单纯的手法操作、无痛苦、无任何毒副作用的绿色自然疗法,孩子容易接受,不会有任何痛苦感,甚至感到是一种享受,使孩子在轻松愉快甚至是游戏之中恢复健康,避免家长"是药三分毒"的担心,完全符合当今医学界推崇的"无创伤医学"和"自然疗法"的要求。

Massage for children, as a natural therapy, is characterized by simple manipulations which cause no pain and no toxic side effects. Kids are prone to accept it, for they can feel no pain, but even a kind of enjoyment. They seem to be in a relaxed or even a game through which they are brought back to health. Parents do not have to worry about "All medicines have toxin more or less". Massage for children is in full compliance with the requirements of "non-invasive medicine" and "natural therapy" that today's medical profession respect.

通过推拿调理,可以提高孩子的抗病能力,使孩子不得病或少得病,即使得病了,也容易康复。这样就避免了盲目和不必要的医疗消费,可以减少不合理的检查和用药行为,从而有效地降低医疗费用的支出。

Harmonizing through massage can improve the child's resistance to disease, so that the child shall not be sick or less sick, even if he gets sick, he can get well soon, thus effectively reducing their medical expenses by avoiding the blind and unnecessary health care expenditures as well as the unreasonable medical examinations and abuse of medications.

少儿推拿的第二个优势就是操作简便,易学好懂。

A second advantage of massage for children is easy to operate, easy to learn and easy to understand.

少儿推拿操作简单,不需要复杂的医疗设备,只是依靠双手在孩子体表特定的部位施行手法,就可以达到强身健体、防治疾病的目的。而且还可以在孩子熟悉的家庭环境中操作,消除了孩子在疾病治疗过程中的恐惧心理。

Massage for children, simple in manipulation, does not need any complex medical devices, but with your both hands' manipulations on the specific parts of the child's body surface, you can achieve physical fitness, prevent and cure the disease.

同时,少儿推拿还是父母与孩子之间情感交流的渠道,这看似小小的动作却是一种不容忽视的爱的传递。推拿通过经络传送到孩子的脏腑,让孩子的生理和心理同时得到滋养,增进父母与孩子间的情感,促进孩子的身心健康。虽然孩子可能不会说话,也可能不会走路,但可以真实的感受到父母的爱,有利于孩子的健康成长。

At the same time, massage for children also serves as the channel of emotional communication between the parents and child, this seemingly small action is the transfer of a love that should never be ignored. Massage is transmitted through the meridians to the *zang* (solid) and *fu* (hollow) organs of the child, nourishing the child both physically and psychologically at the same time, to enhance the feelings between parents and child and to promote the child's physical and mental health. Although the child may not speak, or may not walk, but he or she can truly feel the love of the parents, which is conducive to the healthy growth of the child.

中医的一大特色就是保健,即所谓"上医医未病之病,中医医欲病之病,下医医已病之病",注 重保健则可"不战而屈人之兵"。

A major feature of Chinese traditional medicine is Chinese- style health care, just as an old Chinese saying goes, "The superior doctor treats disease before it arises; the mediocre doctor attends to impending sickness; the inferior doctor treats actual disease." Putting prevention first can "subdue the enemy through no war".

对于孩子来说,健康、快乐成长,预防、减少疾病才是最重要的。做为中医学的一个重要分支的少儿推拿调理,正是传承了这一重要理念并服务于少儿的健康事业。

In order to ensure children to grow happily and healthily, it is most important to prevent and reduce diseases. As an important branch of Chinese medicine, massage for children is such a health care service for children that carries out this important concept.

有人认为养生是老年人的事,孩子只要吃好穿好,没有什么养生问题,这是一个非常错误的认识。 在人的一生中,少儿的生长发育变化是最为显著, 最具特点的。

In the eyes of some people, keeping in good health seems to be a matter for the elderly, but not for children-so long as the children eat and dress well, they have no health problems. This is an extremely wrong understanding. In a person's life the most significant and most characteristic growth and development changes occur in his or her childhood.

少儿养生不仅重要而且非常必要,它决定着孩子一生的健康。少儿推拿就是根据孩子成长的不同阶段有针对性的进行养生保健调理,真正实现健康养生从娃娃抓起。

It is not only important but also very necessary for us to preserve kid's health, which determines the health of the child's life. Massage for children is used for targeted health care at the different stages of child growth, and it is truly a preservation of health care for children to start from the childhood.

少儿为什么适宜推拿呢? Why is massage suitable for children?

少儿的生长发育离不开一定的环境和物质,反过来,环境和物质也同样会对少儿的生长发育产生影响,如饮食、阳光、居住环境、语言、音乐、肢体的运动,甚至连各种姿势都关系着少儿的生长发育。生理上的稚阴稚阳决定了少儿对外界环境的被动适应性和依赖性,而少儿推拿作为一种环境因素,是一种良性的,有序的双向调节性的物理刺激。

Children's growth and development can not be separated from their environment and substances. In turn, the environment and substances will also have impact on children's growth and development. Such factors as diet, sunlight, living environment, language, music, body movement, and even a variety of postures, are related to children's growth and development. Children's physiological developing of *yin* and *yang* determine the passive adaptability and dependence of children on the external environment. Massage for children, as an environmental factor, however, produces a healthy, orderly two-way-adjusting physical stimulus.

因此,通过特有的推拿手法作用于少儿形体,以扶正祛邪,平衡阴阳,能被少儿接受,能被内脏或形质感知,能直接促进少儿生长发育,这是少儿推拿调理的生理基础。

In this way, unique massage manipulations are exerted on child's body to support right and dispel evil, to uphold the balance of yin and yang, to be accepted by child, to be percepted by the internal organs or by the body, thus contributing directly to child's growth and development. This is the physiological basis for the massage regulation for children.

那么,什么是少儿亚健康? So, what is children's subhealth?

少儿亚健康的概念与成人亚健康概念一样,也是指少儿介于健康与疾病之间的一种状态,即亚健康状态。表现为在一定时间内出现活力降低、功能和适应能力减退的症状,比如易感冒、食欲不振、口臭、夜眠不安、小便黄、手足心热、大便不调等,这些症状不符合临床诊断标准。少儿的亚健康临床表现与成年人不同,因而很容易使其父母担心。

The concept of children's sub-health, like the concept of adult sub-health, also refers to a state of children between health and disease. Because of their reduced activity, function and decreased ability to adapt to the environment within a certain time, children's sub-health manifestations include such symptoms as colds, loss of appetite, bad breath, nocturnal anxiety, yellow urine, hot palms & soles, and abnormal stool. These symptoms do not meet the clinical diagnostic criteria. Children's sub-health clinical manifestations are different from those of adults; therefore, they are very easy to make parents worried.

目前对亚健康的研究所针对的人群都集中在成人,在多数人的概念中,亚健康是成人的事,少儿不存在亚健康。但事实上在现实生活中少儿亚健康的状况同样存在,只是被人们忽视了而已。

At present the sub-health target research group focus on the adult. In the view of most people, sub-health is a matter for the adults, and it has nothing to do with children. In real life, however, sub-health does exist in children, yet it is ignored.

少儿亚健康对孩子的健康成长及家庭、社会甚至国家的未来都将产生严重的负面影响。少儿亚健康的产生除了先天体质禀赋、后天饮食调理等因素外,还和家庭生活水平、生长环境、社会环境、学校和家长的教育方式等密切相关。

Children's sub-health will exert a serious negative impact on the health and growth of children, on the families, on the society and even on the future of the country. In addition to congenital physical factors and acquired dietary factors, the causes of children's sub-health are closely related to their family living standards, growth environment, social environment, school education, parents education and other factors.

少儿亚健康对孩子造成的危害在某种程度上讲比成人更为严重,往往更接近疾病状态。少儿亚健康如不及时干预,与成人相比,更容易发展为疾病。

The sub-health hazards to children are more serious than to adults in a certain sense, and usually closer to the disease state. Compared with adults', children's sub-health, if not timely intervened, is more likely to become a disease.

这是由于少儿为稚阳之体,易受外界环境的影响,自身抗病和调节能力较差,所以,在病理上表现为发病容易,传变迅速。从人体的外部环境讲,寒暖不能自调,容易为六淫所侵;从人体的内部环境讲,饮食不知自节,容易被乳食所伤。临床常见在同等条件下,成人可安然无恙,孩子则罹病在身。

This is because children are so tender that they are vulnerable to the impact of the external. environment. Their poor resistance to diseases and poor self-regulation capability make themselves easy to get sick. And what is more, disease can rapidly change in pathology. Viewing from the external environment of an infant, he does not know when and how to add and reduce clothes to adapt to the change of the warmness and coldness, so he is easily attacked by the six evils; while from the internal environment of an infant, since he is not able to control the milk-diet, he is likely to be sick from improper feeding. Clinically, it is common that under the same conditions, adults can be safe, but children are diseased.

比如易感体质,就会出现反反复复的感冒,就有可能导致呼吸系统的疾病如慢性支气管炎、循环系统的心肌炎、泌尿系统的急、慢性肾炎等;夜眠不安可能导致少儿生长缓慢、机体抵抗力下降,甚至影响少儿的智力发育;肥胖症倾向则可能引起脂肪肝、高血压病、冠心病、糖尿病、脑血管疾病等等。

For the predisposed child cases, for example, there will be a cold repeatedly, which may cause diseases such as chronic bronchitis of the respiratory system, myocarditis of the circulatory system, acute and chronic nephritis of the urinary system. Restless sleep may lead to children's slow growth, decreased body resistance, and even affect children's intellectual development. Obesity tendency may result in fatty liver, hypertension, coronary heart disease, diabetes, cerebrovascular diseases, etc.

而少儿亚健康如果采取积极有效的综合干预, 也更容易使机体恢复到健康状态。这是因为少儿 脏气清灵,反应敏捷,生机旺盛,再生力强,故 有利于康复。

Children's sub-health, if active and effective interventions are taken, may also get back to health. This is because children have clearness of visceral *qi*, quick reaction, renewable and strong viability, and these factors are conducive to recuperation.

如《景岳全书·小儿则》云:"其脏气清灵,随拨随应"。《小儿推拿秘诀》也说:"倘能查其病症,寻其穴道,施以手法……,未有不随试而效者"。可见,少儿虽然脏腑柔弱,但机体反应灵敏,脏腑发育、再生、修复能力强,只要采取及时、有效的调理,一般恢复都较快。这是少儿推拿调理的病理基础。

According to *The Complete Works of Zhang Jingyue* • *Children Volume*." In little children, their sickness can be soon cured while being treated, because their visceral qi is clear." The same idea can also be found in *The Pediatric Massage Tips*. "Massage for children can get instant effect whenever used, if the illness is diagnosed, the acupuncture points are located and the manipulation of massage is performed accordingly." Here, although little children's zangfu organs are tender, they are actively responsive and have strong abilities to develop, to regenerate and to repair. So long as timely and effective regulation is taken, the children usually recover quickly.

处于亚健康状态的孩子,非常需要而且可以通过少儿推拿调理到健康状态。如果能对亚健康的危险因素进行综合干预,就可以解除亚健康状态对少儿健康的威胁,提高少儿生活质量和健康水平。少儿推拿调理是从平衡身体的阴阳着手,"阴平阳秘,精神乃治",只有从根本上解决了亚健康问题,孩子的身体才能"长治久安"。少儿亚健康状态得到有效调理后,将大大降低各种疾病的发病率,使孩子身心健康、快乐成长。 It is very necessary for children in the sub-health status to be regulated to restore health through massage. If the sub-health risk factors are effectively intervened, the threat to children's health can be lifted and children's quality of life and health can also be improved. Massage régulation for children is based on the TCM theory of the balance between *yin* and *yang* in the body. Only when *yin* and *yang* are balanced, can children's subhealth problems be fundamentally solved, and they can keep "long-term stability". After the effective massage regulation for children's sub-health is made, the incidence of various diseases will be greatly reduced.

利用推拿调理来调整少儿亚健康状态有着悠久的历史和广泛的医疗实践基础,是对少儿亚健康进行干预的有效方法,而且越来越受到家长和医务人员的重视。

Based on a broad range of medical practice, massage regulation for Children's sub-health enjoys a long history. It is a proven effective intervention against children's sub-health, thus increasingly drawing attention of parents and medical staff.

少儿亚健康推拿调理产业链形成后,可以带动中药、纺织、制造等许多行业向前发展,不仅增加了数十万少儿推拿调理师的就业岗位,还可以增加其他行业数十万的就业岗位,履行少儿亚健康推拿调理产业的社会责任!

The industry chain of massage regulation for Children's sub-health, once formed in place, will push Chinese medicine, textiles, manufacturing, and many other industries forward, so as to create not only hundreds of thousands jobs as pediatric massagists but also hundreds of thousands jobs for other related trades.

少儿亚健康推拿调理产业链形成后,将会为少儿健康成长发育保驾护航,增加了一个绿色服务手段。

When children's sub-health massage regulation industry chain is in place, a green service will add to the development of children health.

智利诗人加伯列说:我们需要的许多东西可以等待,可是孩子们的事却不能等待。就在此时此刻,他们的骨骼在形成,他们的血液在生长,他们的感官在发育。对孩子们来说,我们的回答不能是"明天"而只能是"今天"!

A Chilean poet said, There are a lot of things we need to wait, but the things for the kids cannot afford to wait. At the present moment, their bones are forming; their blood is growing; and their sense organs are developing. For the kids, our answer is not "tomorrow" but can only be

"today"!

健康成就未来,少儿智则国家智,少儿强则国家强。

A country's future depends on its children's health. Children's Health achieves their country's future. If children are intellectual, so is their country. If children are strong, their country is strong, too.
